New Data Model of RGURS

- The main role of the system is implementation of Geoportal of Spatial Data Infrastructure of the Republic of Srpska and ways of distribution and data exchange in accordance with the legal framework, as well as with the concepts defined by INSPIRE directive.
- SDI comprises geospatial data, their metadata, services and appropriate standards. Geospatial data are at the core of SDI whereas metadata provide descriptions about data and provide information for discovery, evaluation, extraction and use of geospatial data.

Geodetske Radnje

U RAZVOJU!

Geoportal predstavlja ciljno mjesto za prikaz geoprostornih podatka, njihov pregled, izmjenu i pretragu. Geoportal aplikacija Republičke uprave za geodetske i imovinsko-pravne poslove je izrađen na način da sa jedne strane, kroz servise i aplikacije omogućava prezentaciju, distribuciju i naplatu distribuiranih podataka iz nadležnosti Uprave, a sa druge strane da obezbijedi interoperabilnost sa podacima drugih institucija Republike Srpske koji zajedno sa podacima Uprave čine IGPRS, a sve u skladu sa INSPIRE direktivom i drugim međunarodnim standardima u ovoj

SERVISI

Mreža permanentnih GPS/GNSS stanica Republike Srpske je satelitski pozicioni servis u nadležnosti Republičke uprave za geodetske i imovinsko-pravne poslove Republike Srpske.

Katalog Objekata

Katalog objekata služi kao sadržaj za tipove objekata ili klasa koji se mogu pronaći na Geoportalu. U okviru katalaga objekata može se izvršiti pretraga i pristup podacima koje poseduje Republička uprava za geodetske i imovinske pravne poslove.

Katalog Metapodataka

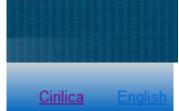

Katalog Metapodataka je web aplikacija čiji glavni cilj je pregled i kreiranje metapodataka u skladu sa INSPIRE direktivom (2007/2/EC)1 i INSPIRE Metadata Regulation (1205/2008)2. Katalog Metapodataka omogućava opis skupa prostornih podataka ili prostronih servisa u skladu sa standardima ISO 19115:2003 i ISO 19119:2005iii.

eTerraSoft - KAT/KANC/DGP

eKatastar - eTerraSoft

eTerraSoft

- Desktop application
 - Java
 - Jasper Reports
- Contains modules:
 - Authorization
 - User search, view and print the real estate real property papers, print certificates of cadastral income and certificates of possession, printed copies of the plan, review of parcel data - graphics and topologies
 - Cadastral Land Cadastre and Real Estate
 - The establishment of land cadastre (LC) and real estate cadastre (REC)
 - Implementation of changes in LC and REC printing solutions alphanumeric and graphic
 - Summary of the possession list and real estate by municipalities
 - Summary plots by municipalities-alphanumeric and graphic
 - system records
 - office management

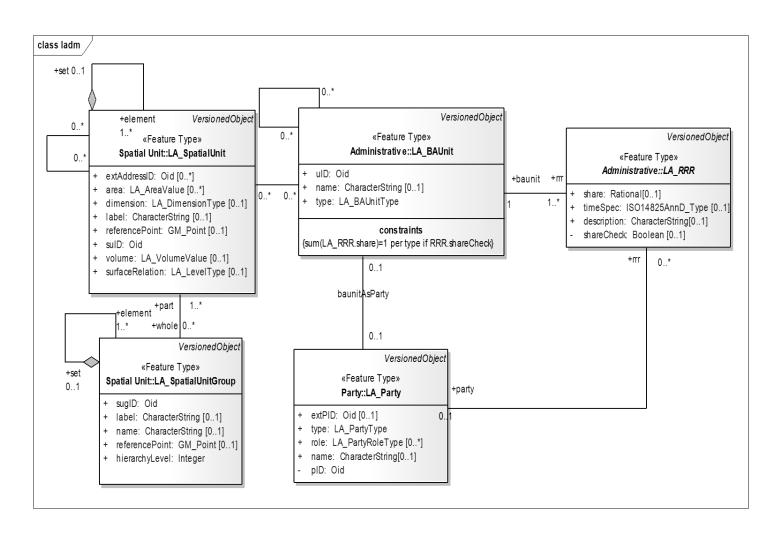

Historical development of application eTerraSoft

Year	Platform/Language	Version	Database / Application		
1988.	Cobol	Ver. 1.0	system files, application on one computer		
1990.	Ingres	Ver. 2.0	DBMS, application on one compute		
1995.	Progres	Ver. 3.0	DBMS, user applications		
1999.	Progres, Windows, Autocad	Ver. 4.0	DBMS, user applications, graphics through the CAD tool		
2001.	Progres, Oracle	Ver. 4.1	DBMS, alphanumeric in progres, graphics in oracle - separate user applications		
2010.	Oracle, java	Ver. 5.0	DBMS, integrated alphanumeric and graphics with the standardized data model		

PROFILE MODEL - DOMAIN OF CADASTRE OF THE REPUBLIC OF SRPSKA ver.5

- Based on LADM (Land Administration Domain Model ISO 19152)
- LADM is modeling data relating to the parcels, such as rights and holders of real estate
- This model is expanded by adding additional classes and attributes to the model in accordance with the local legislation.
- Result of the expansion of the basic model is LADM profile model domain for Cadastre in the Republic of Srpska.

LADM – base classes
